

### Amendments to Specification

Please amend paragraph [0019] as follows:

[0019] FIG. 3C shows a measurement of a lateral shift versus an incident angle onto the filter mirror assembly;

FIG. 3D shows collective measurements of the coupling loss versus the lateral shift  $\Delta x$  for four given collimated beam sizes;

FIG. 3E shows the T-channel (transmission) coupling loss as a function of the tilting angle of the filter mirror assembly, for a fixed 1.2mm thickness substrate with an index of refraction value 1.5 at various beam waist radii;
